

Index

Indicators with blue tabs were updated for the June 6th update
Indicators with green tabs were updated for the July 4th update
Indicators with orange tabs were updated for the July 24th update
Indicators with red tabs could not be updated for the 2014 project

Table I-1-a: Ratio of Money Income of the 10th and 90th Percentile for Census Families for Vital Signs Communities, 2001, 2005 and 2006 (Current Dollars)

Table I-1-b: Adult Equivalent Money Income Ratio of the 90th Over the 10th Percentile in Vital Signs Communities, 1990, 1995 and 2000

Table I-2-a: Overall Poverty Rate, Census 2000 and 2005 (LICO), NHS 2010 (LIM)

Table I-2-b-i: Overall Incidence of Poverty for All Persons Based on LICO in Vital Signs Communities (SLID), After-Tax, 1992 Base, 1980, 1985, 1990, 1995 and 2000-2011, Per Cent

Table I-2-b-ii: Overall Incidence of Poverty for All Persons Based on Low Income Measure (LIM) in Vital Signs Communities (SLID), After-Tax, 1985, 1990, 1995, 2000-2011, Per Cent

Table I-2-b-iii: Overall Incidence of Poverty for All Persons Based on Market Basket Measure in Vital Signs Communities (SLID), After-Tax, 2000-2011 (2011 Base) Per Cent

Table I-2-c: After Tax Overall Poverty Rate for All Persons in Vital Signs Communities, (LIM, Tax Data), 2000-2012

Table I-3-a: Child (Persons 18 years and under) Poverty Rate, Census 2000 and 2005 (LICO), NHS 2010 (LIM)

Table I-3-b-i: Incidence of Child (0-17 years) Poverty in Vital Signs Communities Using LICO (SLID), After-Tax, (1992 Base) 1980, 1985, 1989, 1990, 1995 and 2000-2011, Per Cent

Table I-3-b-ii: Incidence of Child (0-17 years) Poverty Based on Low Income Measure (LIM) in Vital Signs Communities (SLID), After-Tax, 1980, 1985, 1990, 1995, 2000-2011, Per Cent

Table I-3-b-iii: Incidence of Child (0-17 years) Poverty in Vital Signs Communities Using Market Basket Measure (SLID), After-Tax, 2000-2011 (2011 Base), Per Cent

Table I-3-c: After Tax Poverty Rate for Children (0-17 years of age) for All Persons in Vital Signs Communities, (LIM, Tax Data), 2000-

Table I-4-a: Incidence of Poverty for the Elderly, Census 2000 and 2005 (LICO), NHS 2010 (LIM)

Table I-4-b-i: Incidence of Poverty Based on LICO for the Elderly (65+) in Vital Signs Communities (SLID), After-Tax, (1992 Base) for 1980, 1985, 1990, 1995 and 2000-2012, Per Cent

Table I-4-b-ii: Incidence of Poverty Based on Low Income Measure (LIM) for the Elderly (65+) in Vital Signs Communities (SLID), After-Tax, 1985, 1990, 1995, 2000-2011, Per Cent

Table I-4-b-iii: Incidence of Poverty Based on Market Basket Measure for the Elderly (65+) in Vital Signs Communities (SLID), After-Tax, 2000-2011 (2011 base), Per Cent

Table I-4-c: After Tax Poverty Rate for Persons aged 65 and over for All Persons in Vital Signs Communities, (LIM, Tax Data), 2000-

Table I-5: Use of Food Banks by Unique Individuals for Select Vital Signs Communities in March of 2002 to 2013

Table I-6: Proportion of Economic Families in Income Brackets in Vital Signs Communities, 2000 (2005 Constant Dollars), 2005

Table I-7-a-i: Median Income of Single-Parent Families (Tax Data), Before tax, 2000-2012 (Current Dollars)

Table I-7-a-ii: Median Income of Single-Parent Families (Tax Data), After Tax, 2000-2012 (Current Dollars)

Table I-7-b: Median Income of Single-Parent Families, Census 2000, 2005, NHS 2010 (Current Dollars)

Table I-7-c: Median Total Income of Lone-Parent Economic Families, 1980, 1985, 1990, 2000-2011 (SLID, 2011 constant dollars)

Table I-8-a: Poverty Rate of Single-Parent Families, Census 2000 and 2005 (LICO), NHS 2010 (LIM), Current Dollars

Table I-8-b-i: Poverty Rate of Single-Parents Families, After Tax LICO (SLID), 1980, 1985, 1990, 1995, 2000-2011 (1992 base)

Table I-8-b-ii: Poverty Rate of Single-Parents Families, After Tax LIM (SLID), 1980, 1985, 1990, 1995, 2000-2012

Table I-8-b-iii: Poverty Rate of Single-Parents Families, Market-Based Measure, After Tax Basket (SLID), 2000-2011 (2011 base)

Table I-8-c: After Tax Poverty Rate of Single-Parent Families, (LIM, Tax Data), 2000-2012

Note: There are hidden tables with data on pre-tax measures.

Table I-1-a: Ratio of Money Income of the 10th and 90th Percentile for Census Families for Vital Signs Communities, 2001, 2005 and 2006 (Current Dollars)

	10th percentile income					90th percentile income					Ratio of 90th over 10th percentile income

Table I-1-b: Adult Equivalent Money Income Ratio of the 90th Over the 10th Percentile in Vital Signs Communities, 1990, 1995 and 2000

	1990	1995	2000	1990-2000 % change
Ontario				
Sudbury (CMA)	5.2	6.0	5.8	11.9
Toronto (CMA)	5.2	6.6	6.1	17.2
Kitchener (CMA)	4.5	5.2	4.9	9.6
Kingston (CMA)	5.2	5.7	5.9	-1.0
Alberta				
Calgary (CMA)	5.6	6.1	5.5	-1.6
Medicine Hat (CA)	n.a.	n.a.	n.a.	n.a.
British Columbia				
Victoria (CMA)	5.1	5.6	5.6	10.2
Clayoquot Sound	n.a.	n.a.	n.a.	n.a.

Note: "Equivalent income" is calculated using the following method: For the adjusted family size, the first adult is counted as 1 person, each additional adult as 0.4 person, and each child aged 17 years or younger as 0.3 person (except in the case of a family with one adult and children; here, the first child is counted as 0.4 person). This accounts for the economies of scale present in increasing family size.

Last updated: May 8, 2014

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

** Clayoquot Sound's values are calculated as the weighted total of Tofino and Ucluelet.

Last updated: May 8, 2014

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

**Clayoquot Sound's values are calculated as the weighted total of Tofino and Ucluelet.

Note: Data are for persons 65 years old and over; For an explanation of the differences between the various low income measures used by Statcan, see:

<http://www.statcan.gc.ca/bsolc/olc-cel/olc-cel?catno=75F0002M2011002&lang=eng>

For new communities (added in 2009 and 2013) could not find Census 2001 data that were consistent with prior figures. As such, the data for 2000 were not added for these new communities.

Source, 2000: Census of Population 2006. Topic-based tabulations. Income Status Before Tax (4), Economic Family Structure and Presence of Children for the Economic Families; Sex, Household Living Arrangements and Age Groups for the Persons 15 Years and Over not in the Economic Families; and Sex and Age Groups for the Persons in Private Households (88)

Source, 2005: Statistics Canada, 2006 Census of Population. Topic-based tabulations. Income Status Before Tax and Income Status After Tax (8) and Economic Family Status and Age Groups (80)

Source, 2010: Statistics Canada. National Household Survey (NHS) Profiles 2011

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

* This signifies that the information for these regions is the proportion of the population in March of the given year.

Source: Food Banks of Canada, *Hunger Count* reports

Link: <http://www.foodbankscanada.ca/About-Us/Publications/Research.aspx>

Last Updated: May 8, 2013

Note: For Canada, the population estimates used were from Cansim table 051-0001, series number v466668. The boundaries used to categorise the data on food bank by city are not well defined. Because the large majority of food banks are located in cities, the population estimates used are those of the cities, not of the CMAs (from the 2006 Census).

1 For 2010, a value centred between two income brackets indicates that the proportion corresponds to both brackets collectively.

2 For 2010, this value corresponds to the proportion of economic families with an income of less than \$20,000.

Note: Family refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption.

See Appendix Table XI-8 for the number of families in each bracket.

1 For 2010, a value centred between two income brackets indicates that the proportion corresponds to both brackets collectively.

2 For 2010, this value corresponds to the proportion of economic families with an income of less than \$20,000.

Note: Family refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption.

See Appendix Table XI-8 for the number of families in each bracket.

Last updated: May 12th, 2014

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

Note: See Appendix Table II-5-i-v for more detailed information. n.a implies that figures are too unreliable to be published and * indicates that the numbers should be used with caution. For CMAs Very Safe and Reasonably Safe were combined for the safe category for walking alone after dark and Very Satisfied and Somewhat Satisfied were combined under general satisfaction with personal safety. See Appendix. For Feeling of Safety questions, only those who participated in the activity were included.

¹ When 2006 data were not available, 2007 data were used to calculate the percentage change.

Note: Hate crimes refer to criminal offences motivated by hate towards an identifiable group. The incident may target race, national or ethnic origin, language, colour, religion, sex, age, mental or physical disability, sexual orientation or any other similar factor, such as profession or political beliefs. Populations have been adjusted to follow policing boundaries and to reflect missing coverage from the Royal Canadian Mounted Police outside of British Columbia. Provincial data on police reported hate crime only available for Quebec, Ontario, and British Columbia prior to 2010.

Source: Statistics Canada. "Hate Crime in Canada," based on data from Canadian Centre for Justice Statistics, Uniform Crime Reporting (UCR2.2) Survey and Supplemental Hate Crime Survey.

¹ When 1998 data were not available, 2003 data were used to calculate the percentage change.

Note: The Crime Severity Index weights the severity of a crime by the rate of incarceration multiplied by the average incarceration period. The weights for each crime are multiplied by the volume of such crimes committed and the index is set such that the value is 100 in the year 2006. The crime rate consists of all Criminal Code offences excluding traffic. It also excludes drug offences and all federal statutes.

Note: Shelters were asked to provide information for the 12-month period ending March 31, 2012 or their own 12-month fiscal period. Because the number and type of shelters participating in each cycle of the Transition Home Survey may vary, comparisons of admissions across survey cycles are not advisable.

For information on health regions and on the share of the relevant health region population represented by Vital Signs Communities, please refer to Table XI-1-a-iii

Note: The rate of low birth weight babies is defined as the number of live newborns with a birth weight less than 2,500 grams divided by the number of live newborns with a valid birth weight) in percentage

Note: Low birth weight babies are babies that weigh less than 2,500 grams

Note: CIHI data for 2001-2002 to 2012-2013 are for the fiscal years defined as April 1 to March 31 of the following year.

*Starting in 2001, Ontario data is only available for LHINS

**Rates for the CMA of Toronto use population weighted averages of the rates for the health regions (Census 2001 and 2006)

*** Percentage change for Alberta was calculated comparing the Zone for 2011-2012 to the Health Region for 2001-2002

For information on health regions and on the share of the relevant health region population represented by Vital Signs Communities, please refer to Table XI-1-a-iii

Note: Population aged 12 and over reporting level of physical activity, based on their responses to questions about the frequency, duration and intensity of their participation in leisure-time physical activity. Respondents are classified as active, moderately active or inactive based on an index of average daily physical activity over the past 3 months. For each leisure time physical activity engaged in by the respondent, an average daily energy expenditure is calculated by multiplying the number of times the activity was performed by the average duration of the activity by the energy cost (kilocalories per kilogram of body weight per hour) of the activity. The index is calculated as the sum of the average daily energy expenditures of all activities. Respondents are classified as follows: 3.0 kcal/kg/day or more = physically active; 1.5 to 2.9 kcal/kg/day = moderately active; less than 1.5 kcal/kg/day = inactive.

Note: When data for 2003 was not available, available data from the most recent year was used to calculate the percentage point change

For information on health regions and on the share of the relevant health region population represented by Vital Signs Communities, please refer to Table XI-1-a-iii

Note: This variable is based on the Canadian Community Health Survey (CCHS) Food Security module, a set of 18 questions, and indicates whether households both with and without children were able to afford the food they needed in the previous 12 months. The levels of food security are defined as: 1- Food secure: No, or one, indication of difficulty with income-related food access; 2- Moderately food insecure: Indication of compromise in quality and/or quantity of food consumed; 3- Severely food insecure: Indication of reduced food intake and disrupted eating patterns.
 Note: Missing data is because data was too unreliable to publish

*Rates for the CMA of Toronto use population weighted averages of the rates for the health regions (Census 2001 and 2006)

**For Alberta, percentage change was calculated using the Zone for 2011 and the Health Region for 2000

Note: The Census definitions of educational attainment were changed between the 2001 and 2006 Census so changes should be interpreted with caution. For more details, see

<http://www12.statcan.ca/english/census06/reference/infocensus/education.cfm>. The large increase in the Aboriginal population is in large part due to increases in the Metis population (more than 30 per cent in 5 years), which reflects a higher rate of identification of that group, and not necessarily higher fertility rates. Since the Metis are in general more educated than the North American Indian and Inuit populations, part of the improvement in high school completion rates is explained by

¹ 2001 data for these years were taken for the age group 25 and above; this was the closest approximation available to the age group 25 to 64. This means the data will be slightly overestimated.

² This reflects the total number of Aboriginal Canadians less those individuals without any certificate, diploma, degree. It represents the closest available definition to compare with the 2001 group of individuals with "High school graduation certificate or above."

³ The boundaries of these areas changed between 2001 and 2006 as they changed from CA's to CMA's.

Source 2011: Statistics Canada, NHS 2011

Note: Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared to Census estimates, especially for estimates corresponding to small geographies.

Note: These data represent year-round shelters and beds in communities. They do not include overflow or seasonal shelters and beds. For this reason, these numbers are an under-representation of the shelter capacity in each of the designated communities. "Emergency Shelter" is defined as a facility providing temporary and short-term accommodation for homeless individuals and/or families, and which may include essential services such as food, clothing and counselling. Year-over-year changes may reflect increases in the number of shelters participating in the Homeless Individuals and Families Information System (HIFIS) Initiative.

Note: These data represent year-round shelters and beds in communities. They do not include overflow or seasonal shelters and beds. For this reason, these numbers are an under-representation of the shelter capacity in each of the designated communities. "Emergency Shelter" is defined as a facility providing temporary and short-term accommodation for homeless individuals and/or families, and which may include essential services such as food, clothing and counselling. Year-over-year changes may reflect increases in the number of shelters participating in the Homeless Individuals and Families Information System (HIFIS) Initiative.

*2001 and 2006 Census report values for Kitchener (CMA), where as 2011 NHS reports values for Kitchener-Cambridge-Waterloo (CMA). Percentage change was calculated comparing Kitchener-Cambridge-Waterloo (CMA) data for 2010 to Cambridge (CMA) data for 2011

Note: When value for 2001 was not available. 2006 was used to calculate percentage change.

Source, 2011: Statistics Canada, NHS 2011. NHS Profile

Source, 2006: Statistics Canada. Census 2006. Topic-based tabulations. Period of Construction (11), Structural Type of Dwelling (10), Housing Tenure (4) and Condition of Dwelling (4) for Occupied Private Dwellings of Canada

Source, 2001: Statistics Canada. Census 2001. Topics-based tabulations. Period of Construction (10), Condition of Dwelling (4) and Tenure (4) for Occupied Private Dwellings

Note: Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared to Census estimates, especially for estimates corresponding to small geographies.

Note: Canada data are population weighted averages. Boundaries of the regions above may not coincide with the CMA boundaries. The "RBC Housing Affordability Measure captures the proportion of median pre-tax household income required to service the cost of a mortgage on an existing housing unit at going market prices, including principal and interest, property taxes and utilities; the modified measure used here includes the cost of servicing a mortgage, but excludes property taxes and utilities due to data constraint in the smaller CMAs. This measure is based on a 25% down payment, a 25-year mortgage loan at a five-year fixed rate, and is estimated on a quarterly basis. The higher the measure, the more difficult it is to afford a house." Definition taken from RBC Economics Research. Housing Trends and Affordability. May 2013.

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

**For 2011, the values for Clayoquot Sound are calculated as a total of only Itatsoo, Marktosis, Refuge Cove, Opitsat, and Esowista.

Note: Income data for 2000 and 2005 refer to the total average income for all economic families, where an economic family is defined as a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption. Income data for 2010 refer to the average total employment income for all individuals with employment income. Employment income is defined as the total income received by persons aged 15 years and over during calendar year 2010 as wages and salaries, net income from a non-farm unincorporated business and/or professional practice, and/or net farm self-employment income.

*When data from the 2003-2012 period is available, the full period that is available was used to calculate the percentage point change

1 Population weighted averages were calculated for Toronto (CMA) using 2001 and 2006 Census data. For information on the share of the relevant health region population represented by Vital Signs Communities, please refer to Table XI-1-a-iii.

2 The percentage change in Calgary was calculated using the 2012 value for Calgary Zone and the 2003 value for Calgary Health Region because the boundaries for these two areas are identical. For Edmonton, it was calculated using the 2012 value for Edmonton Zone and the 2003 value for Capital Health Region.

Note: Percentage point changes were found using 2005 if 2003 data were not available. Population aged 12 and over reporting level of physical activity, based on their responses to questions about the frequency, duration and intensity of their participation in leisure-time physical activity. Respondents are classified as active, moderately active or inactive based on an index of average daily physical activity over the past 3 months. For each leisure time physical activity engaged in by the respondent, an average daily energy expenditure is calculated by multiplying the number of times the activity was performed by the average duration of the activity by the energy cost (kilocalories per kilogram of body weight per hour) of the activity. The index is calculated as the sum of the average daily energy expenditures of all activities. Respondents are classified as follows: 3.0 kcal/kg/day or more = physically active; 1.5 to 2.9 kcal/kg/day = moderately active; less than 1.5 kcal/kg/day = inactive.

Vancouver	1998							
	2005							
	2010							

Note: In 2010 the categorizations used in the GSS on Time Use were different than they have been in the past. The question concerning attendance at live performing arts was dropped in 2010 due to its overlap with other categories, resulting in a skewing of some other categories relative to past years. As such, the 2010 data are not comparable with the data from previous years.

E: Use with caution.

F: Too unreliable to publish.

Source: Statistics Canada, special request, General Social Survey, 2010, 2005 and 1998. For national data in 2005, Hill Strategies Research (2007) "A Profile of the Cultural and Heritage Activities of Canadians in 2005," Statistical Insights on the Arts, Vol. 5 No. 4, March.

Note: The survey collects data over a twelve month period from the population living in private households in the 10 provinces. The population aged 15 and older has been sampled. The sample size was 15,400 in 2010.

The questions asked were:

¹During the past 12 months, did you: attend a concert or performance by professional artists of music, dance, theatre, or opera, excluding cultural festivals?

²During the past 12 months, did you: attend a theatrical performance such as a drama, musical theatre, dinner theatre, comedy?

³During the past 12 months, did you: attend a popular musical performance such as pop/rock, jazz, blues, folk, country and western?

⁴During the past 12 months, did you: attend a symphonic or classical music performance?

⁵During the past 12 months, did you: go to a cultural or artistic festival (such as film, fringe, dance, jazz, folk, rock, buskers or comedy)?

⁶During the past 12 months, did you: go to a performance of cultural/heritage music, theatre or dance (e.g. Aboriginal Peoples, Chinese, Ukrainian)?

⁷During the past 12 months, did you: attend any other kind/type of cultural performance?

Years for which the average daily flow of water per capita is identical within a municipality may indicate that a municipality did not respond to the Wastewater Survey. When this happens, Environment Canada imputes the data based on the last survey response by the municipality.

Note: The average daily flow of water for CMAs with more than one municipality with water distribution services is estimated by the population weighted average of the municipal water distribution services, based on the 2001 Census for 1999 and 2001 data, the 2006 Census for 2004 and 2006 data, and the 2011 for 2009 data. If the current data for a census subdivision was unavailable, data for the previous year was used. If there was no previous data (like data for 1999), the closest future year was used. The total population for the municipal water distribution service does not necessarily match the population of the municipality.

Source for municipal data: Environment Canada Water Use Data. Based on Municipal Water and Wastewater Survey for survey years 1999, 2001, 2004, 2006, and 2009.

Source for provincial data: Summary Table 1 for 2001, 2004, and 2006. Summary Table 3 for 2009.

Source: Environment Canada. Data obtained by special request from Air Quality Research Division at Environment Canada
 Note: The definitions for ground-level ozone and particulates are from the community accounts data published by the Government of Newfoundland and Labrador
http://www.communityaccounts.ca/CommunityAccounts/OnlineData/acct_selection.asp?comval=prov&menucomval=prov&whichacct=env

Definition: Ground-level ozone is a reactive, unstable form of oxygen. In very high concentrations, it is a bluish gas. It has a characteristic sharp smell which may be recognized around electrical equipment such as motors or arc welders. In the concentrations found in outdoor air, ground-level ozone is both colourless and odourless. Ground-level ozone is formed in the air from other pollutants, most notably nitrogen oxides and hydrocarbons. Slow-moving air and strong sunshine greatly speed up the formation of ozone. Vehicle exhaust are large contributors of ground-level ozone as well as industrial emissions. Ground-level ozone irritates the lungs and can make breathing difficult. Exposure to high concentrations can result in chest tightness, coughing and wheezing. Ground-level ozone can also damage agricultural crops such as potatoes and tomatoes as well as affect trees and other vegetation. Ozone also weakens rubber and attacks metals and painted surfaces. Canada-Wide Environmental Standards (CWSs) have been developed for ground-level ozone. The standard to be achieved by 2015 is 65 ppb. This is based on the 4th highest measurement annually (8-hour means), averaged over 3 consecutive years.

Particulates are particles in the air either from a natural origin or as a result of human activity. PM-2.5 is particulate matter with an effective diameter of 2.5 microns or less which bypass filtration in the nose and may be deposited in the lungs. This is referred to as "respirable" particulate. Common natural sources of particulates include wind-blown soil dust, forest fires, sea salt, volcanoes, and plants, as well as, human activity such as fuel combustion and any other burning, travel on dirt roads, construction work, and mining and quarrying. In analyzing particulates, PM-2.5 is of special significance in terms of health impacts since it has a higher chance of entering and remaining in the lungs if inhaled. People with existing breathing complaints such as asthma, bronchitis, or emphysema are likely to be adversely affected by high concentrations of particulates. Particulates can also cause corrosion and soiling of metalwork or other materials, damage vegetation, and reduce visibility. Canada-Wide Environmental Standards (CWSs) have been developed for PM-2.5. The standard to be achieved by 2010 is 30 ug/m3. This is based on the 98th percentile measurement annually (24-hour means), averaged over 3 consecutive years.

*Data are considered marginal (E) by Statistics Canada guidelines

**Data are considered unreliable (F) by Statistics Canada guidelines. Inferences made using these data are probably inaccurate.

Source for 2005 data: Statistics Canada. Households and the Environment, 2006. Annex Tables 18 and 19.

<http://www.statcan.gc.ca/pub/11-526-x/11-526-x2007001-eng.pdf>

2007 data calculated by the CSLS using the 2007 Canadian Community Health Survey Microdata File.

2009 data calculated by the CSLS using the 2009 Canadian Community Health Survey Microdata File.

The 2011 Households and the Environment Survey did not include these questions. As such, data are not available for 2011.

Note: Air quality data for "Households and the Environment, 2006" was collected in Spring 2006, thus based on summer 2005. Data for "Households and the Environment, 2007" was collected in fall 2007, thus based on summer 2007

1. Households that were aware of an advisory of poor air quality in their area. Because these can be localized events, only a portion of a province's population may be in an area subject to an alert.

F: Too unreliable to be published.

Note: According to the survey: an advisory of poor air quality does not necessarily imply there was an official air quality advisory for the area.

Note: Average monthly maximum/minimum is the average of the daily maximum/minimum for the hottest and coldest months respectively in that year.

The month may vary for year to year and the month that is most frequently hottest and coldest (modal month) is given in brackets.

Note: A stands for 'Airport'

For 2011

<http://www12.statcan.gc.ca/nhs-enm/2011/dp-pd/prof/index.cfm?Lang=E>

Note: Census data are for the Census reference week.

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

For 2001:

<http://www12.statcan.ca/english/Profil01/CP01/Details/Page.cfm?Lang=E&Geo1=PR&Code1=01&Geo2=PR&Code2=01&Data=Count&Search>

For 2006:

<http://www12.statcan.ca/english/census06/data/profiles/community/Details/Page.cfm?Lang=E&Geo1=PR&Code1=01&Geo2=PR&Code2=01&Data=Count&Search>

Note: Census data are for the Census reference week.

For 2011:

<http://www12.statcan.gc.ca/nhs-enm/2011/dp-pd/prof/index.cfm?Lang=E>

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

Source: Labour Force Survey, Special Request Program: A050921

Note: the source for total workers is from Table -3-a-i

Note: 0.0 are estimates with less than 1,500 in Canada, Quebec, Ontario, Alberta, and British Columbia; less than 500 for Newfoundland and Labrador, Nova Scotia, New Brunswick, Manitoba and Saskatchewan; less than 200 for Prince Edward

*ER: Economic Region. For data on the population of communities as a proportion of economic regions, see Table XI-1-a-iv.

See Appendix for further comparison.

¹Definition: Total part-time workers who wanted full-time work includes 4 categories: workers who looked for full-time work but could not find such work because of business conditions, workers who looked for full-time work but could not find such work for other reasons, workers who did not look for full-time work because of business conditions, and workers who did not look for full-time work for other reasons and who could not find full-time work.

²Definition: Involuntary part-time workers include all part-time workers who actively looked for full-time work but could not find it, either because of business conditions or because of other reasons.

Total Income Groups (23) in Constant (2005) Dollars, Age Groups (7A), Highest Certificate, Diploma or Degree (5) and Sex (3) for the Population 15 Years and Over of Canada, Provinces, Territories, Census Metropolitan Areas and Census Agglomerations, 2000 and 2005.
Source 2010: Statistics Canada, 2011 National Household Survey (NHS) Profiles.

Note: "Living Wage" is defined as those earning below \$25,000 per year; this definition is based on a living wage of \$500 per week (50 weeks of work per year) in nominal dollars (ie: the \$500 cut-off is not adjusted for inflation) and refers to the calendar year in this case.

Last Updated: May 21, 2014

*Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared with Census estimates, especially for estimates corresponding to small geographies.

Note: 2008 data by special request.

Source: Provincial and CMA Data: Statistics Canada Special Request 62F0031, Survey of Household Spending (SHS).

*** In 2007 Statistics Canada change the methodology for measuring this statistic. Extra questions were included in 2007 in which respondents gave "yes" or "no" answers.

A "no" answer would cause the subsequent questions to be ignored, which would decrease the total value reported. It should not be used for cross-year comparisons with

2002, 2006, or 2008. The other years may be compared with each other. In 2008 the methodology responsible for the difference in values was reverted back to what was used prior to 2007.

** In 2010 Statistics Canada change the methodology for measuring this statistic, which prevents us from updating this table.

Note: Use of recreation facilities represents the proportion of households that reported spending on sports and recreation activities

Last updated: May 16, 2012

Source: 2001 and 2006 data is from Census Topic Based Tabulations. 2011 Data is from the National Household Survey Profiles

Note: Statistics Canada has noted that, due to changes in survey method and content, 2011 NHS estimates may not be directly comparable to estimates produced from the 2001 and 2006 Census long forms. Caution must be exercised when NHS estimates are compared to Census estimates, especially for estimates corresponding to small geographies.

Note: 'Mode of Transportation' refers to the main mode of transportation a respondent uses to travel between his or her home and his or her place of work. The question was: "How did this person usually get to work" with the indication: "If this person used more than one method of transportation, mark the one used for most of the travel distance."

Note: Retail sales estimates reported in "FP Markets" reports were estimated as follows: Strategic Projections Inc. produces national and provincial economic models which were used by MapInfo Canada in conjunction with a special small area retail sales allocation model. The MapInfo model also made use of spatially aggregated estimates of retail sales by detailed kind of business (NAICS for 2006-2009, SIC for previous years). They are projections published in November of the previous year.

Note: The index of business costs analyzes 27 cost components including facility costs, transport costs, utility costs, depreciation charges, financing costs, non-income taxes and income taxes. The Index is of the average costs of business in 12 industries; of these, 7 are in manufacturing, 2 in R&D, 2 in software and 1 in corporate services. For each year, 100 is the average index value of American cities covered; an index value of less than 100 indicates a better business situation than the U.S. average.

Note: *CMHC changed its source for total residential sales in Quebec in 2010 from CREA to QFREB (Quebec Federation of Real Estate Boards). For this reason, the percentage change for Quebec and Montreal is calculated from 2002-2009. An explanation of the change of the source is found at http://www.fcic.ca/pdf/Carrefour/definitions/en/nouvelles_statistiques_fciq_a.pdf

Table XIII-14: Global Scorecard on Prosperity, Rankings 2010-2014

	2010			2011			2012			2013			2014			Rank Change, 2010-2014		
	Labour Market			Labour Market			Labour Market			Labour Market			Labour Market			Labour Market		
	Economy	Attractiveness	Overall	Economy	Attractiveness	Overall	Economy	Attractiveness	Overall	Economy	Attractiveness	Overall	Economy	Attractiveness	Overall	Economy	Attractiveness	Overall
Toronto	11	2	4	11	4	9	11	5	5	12	5	13	12	3	3	-1	-1	1
Calgary	7	5	5	6	3	3	8	4	4	8	6	2	5	4	2	2	1	3

Note: The rankings are based on a comparison of 24 cities internationally, and uses a scorecard based on 33 indicators grouped into two domains: Economy and Labour Attractiveness. The overall domain rankings are based on a composite index (an average of the normalized scores for each indicator in the specific domain).

Source: Statistics Canada, Community Profiles

Note: The National Household Survey replaced the Census in 2011, and the data should be compared to past Census years with caution.

* In 2001 Sudbury and surrounding area was amalgamated to form Greater Sudbury

** In 2006 Peterborough was changed from a Census Agglomeration to a Census Metropolitan Area

*** In 2006 the boundary for the Lethbridge CMA changed, which adjusted the population count for the CMA in 2001 but not for the city.

Data calculated by CSLS from information on appendix table XI-3-a-i. See Appendix Tables XI-3-a-ii and XI-3-a-iii for more detailed information on CMAs employment by industry.

Notes on Comparability between 2001 and 2006 Census Community Profiles and 2011 National Household Survey Profiles:

1. Agriculture and Other Resource-Based Industries includes: "Agriculture, forestry, fishing and hunting", "Mining, quarrying, and oil and gas extraction" and "Utilities".
2. Finance and Real Estate includes: "Finance and insurance" and "Real estate and rental and leasing".
3. Health care and social services = "Health care and social assistance".
4. Business services includes: "Transportation and warehousing", "Information and cultural industries", "Professional, scientific and technical services", "Management of companies and enterprises", and "Administrative and support, waste management and remediation services".
5. Other services includes: "Arts, entertainment and recreation", "Accommodation and food services", "Other services (except public administration)", and "Public administration".

Note: Construction and Manufacturing are aggregated, Wholesale and Retail are aggregated, Health and Education are also aggregated.
